Subject: Application for Junior AI/ML Engineer Position

Dear Resolv Global Hiring Team,

I am writing to express my strong enthusiasm for the **Junior AI/ML Engineer** position at Resolv Global. As an Electronic Engineer from **Universidad Nacional de Colombia** (GPA 4.6/5.0) and currently a **Project Engineer** at AM4, I combine a rigorous foundation in computational analytics, Python backend development, and applied AI systems. I am excited by Resolv Global's mission of transforming conversational prototypes into resilient, enterprise-grade AI agents for voice and chat.

Throughout my professional engineering experience and technical projects, I have developed core capabilities directly tailored to your technology stack and objectives:

- **AI Agents & Tool Calling:** Developed conversational agents using LLM APIs (OpenAI, Claude, Azure OpenAI) with frameworks like LangChain, implementing dynamic function calling, external tool invocation, API orchestration, and multi-turn state handling.
- **RAG Pipelines & Retrieval Tuning:** Built scalable Retrieval-Augmented Generation workflows featuring semantic document chunking, vector embeddings, hybrid indexing, and evaluation guardrails to ensure grounded and accurate responses.
- **Backend APIs & Production Engineering:** Built and maintained REST APIs with Python (FastAPI), managed SQL databases, containerized services with Docker, and established automated testing and CI/CD pipelines.

I bring **professional working proficiency in English** and native fluency in Spanish, perfectly suited for international cross-functional collaboration with full-stack engineers, CX designers, and operations teams. Based in Bogotá, Colombia, I offer full remote availability and dedication.

Thank you very much for your time and consideration. I would welcome the opportunity to speak in an interview about how my technical skills, proactive problem-solving, and dedication to reliable AI engineering can contribute to Resolv Global's growth.

Sincerely,

Santiago Alejandro Ochoa Quesada
